- Portable
- Canister-free
- Designed for convenient wound management

InoHeal-Mini is a single-use Negative Pressure Wound Therapy (sNPWT) system that applies controlled negative pressure to the wound.

It is designed to help:

- Remove excess wound exudate and fluid
- Maintain controlled negative pressure at the wound site
- Support the wound healing process
- Provide convenient, portable negative pressure therapy

InoHeal-Mini

3 Pressure Levels
Choose -40, -80 or -120 mmHg according to the wound and prescribed therapy.

Canister-Free Design
A compact system without the need of a separate fluid collection canister.

Replaceable AA Batteries
Replace batteries according to usage without replacing the entire device for up to four weeks.

Feedback Alarms
Alerts for leaks, blockages, low battery and therapy status.

Dressings
Matters.

inochi care

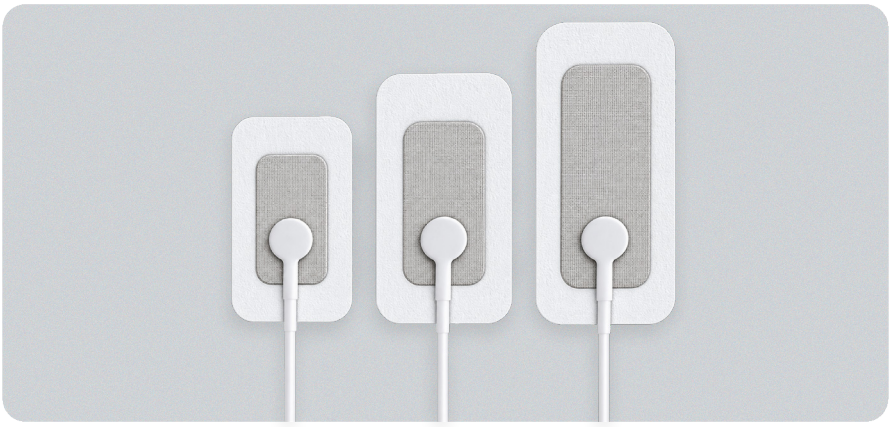
InoHeal dressings are available in different sizes and feature an active functional layer designed to support the wound healing process.



Designed for different wound requirements. The dressing connects directly to InoHeal-Mini, creating a simple, compact NPWT solution.

Available Size	Dimension
Small	15 x 10 cm
Medium	15 x 30 cm
Large	10X30 cm

Key Features

- Adjustable Pressure
- Up to 30-Day Runtime
- Intelligent Feedback
- Replaceable Batteries
- Portable Design
- Cost-Efficient

A cost-efficient alternative to imported NPWT systems.

Key Benefits of

Single-use Negative Pressure Wound Therapy

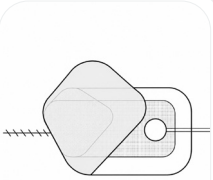
- Improves healing rates
- Reduces surgical site infections
- Shortens median healing times compared to standard dressings

How to Use

Follow the five simple steps to start the therapy.

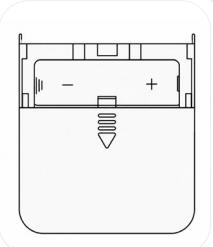
1. Apply the Dressing

Apply dressing over the clean wound and ensure there are no folds.



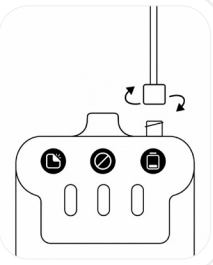
2. Insert batteries

Insert two (2) AA batteries into the battery slot.



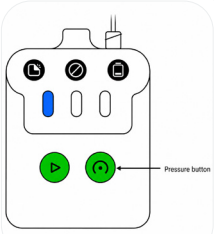
3. Connect tube

Connect the dressing tube to the device.



4. Set pressure

Set the pressure between -40,- 80, and -120 mmHg with the pressure button.



5. Start the therapy

Press the start button to start the therapy
